Respond first in global markets with the right data and the best analytic tools

Clarity and insight on economic developments that drives confident investment and strategic decisions

Navigating volatile markets

The last few years have seen a marked shift in the global economic landscape. The pandemic and increased geopolitical tensions have led to policy changes and commercial decisions that increasingly point towards deglobalization and the reconfiguration of supply chains. We are likely to see continued significant realignment in trade and supply relationships between developed and emerging markets. Against this uncertain backdrop, you need data-driven intelligence that allows you to respond first, and fast, to developments.

Nobody is better placed than CEIC to help you navigate through this economic uncertainty. For over 30 years we have been helping economists, investment strategists and strategic professionals to gain clarity on economic developments in global markets through the most relevant data and the best analytical tools.

Global coverage with deep emerging market expertise

CEIC's economic databases comprehensively cover over 200 global markets. But our renowned emerging markets specialism also offers you a particular advantage. Our deep coverage of the world's highest potential markets is enabled by our "boots on the ground" approach to curating hard to-find data from local sources. Unlike others, we operate extensively in local markets and have forged relationships with the most authoritative and reliable data sources across the world. We blend valuable alternative and high frequency data sets with traditional macroeconomic data to help our users to gain more immediate insight into what's happening now. Our focus is on curating important data that drives insight rather than aggregating huge volumes of data that may never be utilised. Nevertheless, we offer over 10 million data series across global markets so you can be confident you have access to everything you need. We also invest heavily in rigorous quality assurance processes to our data to ensure that gaps are filled and series are standardised to support easy analysis and comparison.

Move from data to insight fast

Delivering high quality data is only part of our story. We also facilitate the generation of insight through leading analytical tools. CEIC users are able to visualise trends and patterns, collaborate on them with colleagues and share them in their preferred formats and house styles. Our tools have been designed to accelerate the process of insight creation so that it can be performed in minutes, extracted immediately to user templates and refreshed automatically when new data becomes available.

Proven forecasting accuracy

The value of our data and tools is evidenced by CEIC's own forecasts. We rely upon the same data we provide to clients to model and publish our own nowcasts and forecasts across multiple markets. Consistently, CEIC forecasts have proven to be highly accurate in predicting outcomes for developed and emerging markets and have outperformed benchmarks.

Committed to customer success

At every stage of your journey with us, we make sure you get the help you need to make CEIC work for you. We have established high-touch onboarding, training and customer support programmes that provide you with access to our technical and content experts around the clock.
